

Projekt:

Clinical relevance of estrogen receptor-related receptor alpha ($ERR\alpha$) expression in postmenopausal women with early-stage, hormone-responsive breast cancer

Einreicher:

M. Filipits

Beurteilung:

General:

This project deals with an interesting and actual issue in the setting of a retrospective tissue based analysis on a study cohort with endocrine therapy. Due to the selected cohort, long term follow up is available and guaranteed, respectively. Furthermore, the study design allows to analyse the effect of therapy. The project team reflects an international scientific collaboration.

Specific annotation:

The approximate number of cases that are planned to be included should be reported in the proposal.

Recommendation:

The referee is in favor of a support of this project.
